Blood Vessel/Redness Removal From Face & Chest with the Cynergy Laser:

The Cynergy laser is a new type of device that encompasses two lasers in a single treatment.

The two laser-beams contact the skin nearly simultaneously to improve our ability to remove unsightly blood vessels and redness from the face and chest. Although temporary bruising can occur, the Cynergy dramatically reduces this possibility.

Our initial patients have been very impressed with the results of this treatment.

Tattoo Removal with the Accolade Laser:

The Accolade is a specialized device that enhances our ability to treat tattoos and allows us to treat more colors than ever before.

For example—for a tattoo composed of green, black and red colors our existing laser (Revlite), which is also new and state of the art, would be used to treat the black and red portions, and the Accolade would be selected for the green portions of the tattoo. Combining both of these lasers for people with multicolored tattoos will allow for fewer treatments and better results.

New Filler Technique with Restylane/Juvederm/Radiesse:

We are now using a new technique of using fillers rather than just filling isolated lines or wrinkles, we can now use these fillers to restore overall volume that is lost on the face with age. Sunken areas such as hollowed cheeks, mild jowls, and grooves under the eyes can now be treated more effectively. Downtime is minimal, although temporary bruising can occur and results typically last from six months to one year.

The goal of my practice is to bring you state-of-the-art care. My office staff is well versed in discussing these new treatments and will be happy to help with inquiries. We look forward to seeing you soon.
